

Introduction

The feminist School of Climate Change is a platform founded by WATED aimed at fostering a deeper understanding of the intersectionality between gender and climate change while equipping participants with the tools and knowledge necessary to drive meaningful change. The feminist School workshop explored the link between gender, climate change, and financing. Through roundtable discussions and presentations, the aim was to enhance understanding among diverse participants from Tanzanian regions.

Challenges

Challenges included limited capacity, particularly in areas such as renewable energy, smart agriculture and harnessing modern technology while realizing traditional/Indegeneous knowledge . Acknowledging these challenges highlighted the importance of stakeholder involvement to overcome obstacles and promote sustainable climate action.

Achievements

The workshop successfully provided participants with valuable insights into climate change, enhanced gender-related skills, and improved understanding of government initiatives in the context of climate financing.

Opportunity

Opportunity: Identified challenges present an opportunity for stakeholder involvement and collaborative efforts to address gaps towards contributing to more effective and sustainable climate initiatives for women and girls.
